Instrumentation Widgets for PDA

Instrumentation Widgets for PDA

Instrumentation Widgets for PDA™ is a complete solution for creating complex user interfaces with the look and feel of real hardware. The library includes meters, sliders, gauges, switches, toggles, dials, and other .NET Compact Framework components written in C#. All controls use double buffering to produce smooth animation and avoid flickering. Moreover, the components are fully customizable: users can change size, color, font type, value range and other properties of each component.

General

Visual components are fully customizable

Custom component settings including sizing, coloring, and freedom from restrictive bitmap controls which limit your form design - all these features allow a developer to design highly-competitive .NET applications for Pocket PCs with excellent user interfaces.

Easy to use

Instrumentation Widgets for Mobile Devices is extremely easy to use. It comes with a demo-application and a convenient hypertext class reference.

Skilled and timely support to users around the world

You can get skilled technical support for the product via e-mail or on the forum on our site within 24 hours.

Easy to deploy

In order to make the application which uses Instrumentation Widgets for Mobile Devices work on a user's machine, simply to copy a few DLLs to the program directory.

Royalty-free runtime

Instrumentation Widgets for Mobile Devices is runtime royalty-free: you can distribute the product with your application to end-users without any additional fees.
