▶ Perpetuum Software LLC is a global software vendor producing professional software components for data processing, analysis and visualization. We implement innovative ideas in our technologies to produce high-end but easy-to-operate software solutions essential for today's business. Our research and development activity is aimed at providing only use-proven solutions and the best technical support to our customers. Our key principle is to do our best to make the quality of our products and services not merely address our clients' requirements, but to exceed their highest expectations.

Perpetuum Software LLC emerged in 2002 when several independent developers joined efforts and began software components' development and marketing activities.

Over the years the company has developed several lines of high-quality .NET and ASP.NET software components compatible with MS Visual Studio .NET, C# Builder, Delphi .NET and other IDEs supporting .NET Framework. The primary focus of our activity is development of software components intended for data processing, analysis, and visualization.

Such use-proven components as Report Sharp-Shooter, Instrumentation ModelKit, OLAP ModelKit, Chart ModelKit and other .NET components by Perpetuum Software are already well known on the software development market. Our customer base is very extensive and unites Fortune 500 companies, governmental and educational institutions, as well as independent developers from all over the world.

The headquarter of Perpetuum Software LLC is located in Russia; and the company has a number of local and international representatives and technology partners throughout the world.

## Licensing

### ► Licensing and Pricing

The licensing and pricing policy pursued by Perpetuum Software is very flexible and suits both corporate customers and independent developers.

All software components are licensed for each computer on which they are installed and used.

If you use the product on more than one computer additional licenses are required. Each additional license costs 50% of the full license price.

When you purchase a license for any Perpetuum Software component you automatically get a one-year subscription for the purchased product. This one-year term subscription enables you to get

- free updates, upgrades, fixes
- free new versions including minor and major releases
- free newly-released product provided that you purchase the .NET ModelKit Suite
- free technical support

After this one-year period you can

- either renew your license for another year on favorable terms,
- or use your current license with product versions released before the subscription expiration date.

► Run-time of all components is royalty-free; this means that you can distribute Perpetuum Software product within your applications without any additional fees.

► OEM Licenses, Volume, Governmental and Educational Discounts are available.

## Perpetuum Software LLC Components

### ► .NET ModelKit Suite

Rapid development of modern business environment challenges decision-makers, who need to make immediate decisions on the base of well-structured, effectively processed and visually presented information. Such decision support system is a strong challenge for the developers as in order to cope with this task they have to look for separate components from different vendors, and solve the problem of their compatibility.

Perpetuum Software LLC offers the .Net ModelKit Suite a package of .NET components which give developers a suite of powerful features that meet the most demanding application development requirements.

### ► Included Components

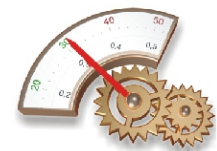

► **Report Sharp-Shooter** - .Net native report generator allowing developers to create feature-rich reports and integrate them into WinForms and WebForms applications. The product provides the ability to design bound and unbound reports with an unlimited number of master-detail relations, export created reports into various formats and print reports at any time.

► **OLAP ModelKit** one of the first OLAP components written in 100% managed code. The product provides the ability to process, analyze and represent data in the form of OLAP reports as you proceed.

► **Instrumentation ModelKit** a cutting-edge component for creation digital dashboards, KPI's and other BI applications for monitoring real-time critical data. The product includes 130+ ready-made gauges and other visual controls. Full-featured designer allows to edit controls as well as to create them from scratch.

▶ **Chart ModelKit** the first charting solution with the true WYSIWYG designer and advanced data binding model providing a set of capabilities for constructing charts without the need to code. The delivery package contains a comprehensive set of 2D charts. Make your applications more professional and informative with the help of Chart ModelKit.

▶ Present-day development is ever-changing, as much advanced technologies emerge too fast to be even aware of them. The cutting-edge tools you use for development today may become out-of-date tomorrow. You have to pay huge amounts of money to use up-to-date tools and components in your development projects. Perpetuum Software LLC offers a subscription service that will help you save money on software updates and be always innovative.

The one-year .NET ModelKit Suite subscription includes:

- Four .NET components: Instrumentation ModelKit, Chart ModelKit, OLAP ModelKit, and Report Sharp-Shooter
- Product updates, upgrades and fixes.
- New product versions including minor and major ones.
- Newly released products
- Free technical support

### ▶ Here are some other .NET ModelKit Suite advantages:

#### ▶ A unified development framework.

The .Net ModelKit Suite is not simply a pack of individual products. It gives you an interconnected development framework with similar design-time and run-time customization facilities, common data management and appearance customization methods. Products are fully compatible with each other.

#### ▶ All components are written in C# and contain only managed code.

#### ▶ Compatibility with .NET Framework 1.1 and .NET Framework 2.0

#### ▶ Compatibility with the most popular .NET IDEs.

All components work with Visual Studio.NET, Borland C# Builder, Delphi.NET, Sharp Develop and other .NET IDEs. Moreover, components work without any IDE. Minimum requirement is the .NET Framework installed on the end user's machine.

#### ▶ Ability to easily add custom languages.

You can easily translate the .NET ModelKit Suite interface into your native language and add it to the .NET ModelKit Suite as an XML file.

#### ▶ Detailed documentation and extensive base of utilization examples are available. Easy to deploy - just copy few DLLs.

In order to make your application using the .Net ModelKit Suite components work on user's machine it is enough to copy only few DLLs to the program directory.

#### ▶ Royalty free run-time.

This means that you can distribute all products supplied within the .NET ModelKit Suite with your application to end-users without any additional fees.

#### ▶ Full source code in C# is available.

By purchasing subscription for the .NET ModelKit Suite Professional Edition you obtain full source code for all products included in the subscription package.

#### ▶ Use of GDI+ advantages: gradient fills, alpha blending etc.

#### ▶ Favorable pricing when switching from competing products to the .NET ModelKit Suite.

If you are using or used any competing software component and consider switching to any Perpetuum Software product, we are ready to make you an advantageous offer and provide you with assistance of any kind. Just contact our representative for competitive pricing options and help.
