

Chastia FM is using of Perpetuum Software products

Information about us and our product Chastia FM – www.chastia.com

What is the sphere your company specializes in?

Our company is specialized in development of graphical information system for support of Facility Management.

In what project do you use Report Sharp-Shooter?

Yes, we are using the Report Sharp-Shooter as presentation tool for visualizing data for end users.

What product features are of high importance for your project?

In our project are high important simple user interface (user experience) and transparent data and graphical outputs for end users.

What advantages did you get by using Report Sharp-Shooter, for example your project was less time and effort-consuming, and your customers were impressed with your work?

Our customers are interested with transparent reports and charts. Very important is also that we have ability to create new reports and charts in some minutes and we can send these new reports to our client by email.

Does the product address your requirements? Are you satisfied with the results of your work?

Yes, we are very satisfied with the results of our work. The Perpetuum Software products helped us create simple, transparent and rich product to reports and charts. Reports and charts are very important to visualize results customer's work!

Chastia FM success story

Chastia FM is the first Slovak comprehensive graphical-database software system for the support of property administration (**Facility Management**).

Our software solves registration of property, administration of project, operational, and other documentation, automation of creating new contracts and invoices for administration activities and renting relations, allocations of expenses for energy and services, energy management of buildings (ground large territories), maintenance of spaces and facilities, etc.

Our customers are property administrators in all fields of activity, heat producers, housing associations and housing companies, administrative buildings, industrial enterprises.

Is also designed for:

- hotels,
- real estate agencies,
- hospitals,
- banks,
- insurance companies,
- Anyone who needs to administrative any property.

To success our software also helps Perpetuum Software with .NET ModelKit suite, mainly with Report Sharp-Shooter and Chart ModelKit. We were looking-for good, smart and simple components for reporting and charting. For our most important was that .NET ModelKit is pure .NET software with small count of small assemblies and in deployment process we can simple copy assemblies to deployment directory. For our customers are most important high-quality data outputs and visualizations in reports and chart forms.

Now, we have ability to create simple, quick and smart reports and charts to our clients. We can send this reports and charts by email to our clients to realize client requirements. Report designer is very simple and especially is available for end users! This point was dominant in decision making to buying of .NET ModelKit from Perpetuum Software.

Why are reports creating in Reports Sharp-Shooter smart? Reports are smart, because we can influence an effect generation of reports by scripting in .NET languages, e.g. C# or Visual Basic .NET to change reports before reports are showing to users. Very strong feature is exporting reports and charts to many formants like PDF, XLS, XML and many more, and we can simple send this reports from our software by email.

Now, our potential customers are also contacting us because they saw reports from our software in their clients and these reports are impressed them – outputs (reports and charts) from our software make us publicity between our customers and their clients (for example invoices).

Now, we have realized about 120 licenses of our complex information system in Slovak and Czech Republic.
